Chapter 1.

SOLUTION OVERVIEW

Designed and tested through multi-vendor cooperation between NVIDIA and its system and ISV partners, NVIDIA EGX™ Server provides a trusted environment for Simulation Engineers/Aerodynamicists/Analysts to run overnight simulations for the Manufacturing & Design, Architecture, Engineering & Construction industries.

1.1 NVIDIA EGX SERVER OVERVIEW

Introduction:

Product Designs are increasingly complex making design validation and verification difficult with engineering simulations. Simulation models for such designs tend to be big as they need to be accurate. This leads to cost-prohibitive, time-consuming simulations. To perform more simulations in less time and to try out many product design ideas, one needs a powerful computer hardware to increase the engineering productivity by accelerating the engineering simulation throughput. NVIDIA EGX Server is a validated solution that brings GPU-accelerated power and performance to deliver the most efficient end-to-end design simulation solution, from interactive sessions in the desktop to batch simulation in the data center.

Audience:

The audience for this document include, but not limited to: Sales Engineers, Field Consultants, Professional Services, Partner Engineers, IT Managers and Customers who wish to take advantage of an appliance that is built and optimized to deliver on simulation workflows.

Chapter 2.

SOLUTION DETAILS

NVIDIA EGX Server is a highly configurable, partner-validated reference design that combines NVIDIA Quadro RTX™ A6000, A40, RTX™ 8000, RTX™ 6000 GPUs with NVIDIA virtual GPU software and leading third-party applications to deliver exceptional compute power in a validated system.

NVIDIA EGX Server for Bare Metal Compute with Altair ultraFluidX™ 2019 is a reference design comprised of (a) NVIDIA Quadro RTX A6000, A40, RTX 8000 or RTX 6000 graphics cards; (b) Altair ultraFluidX 2019 CFD solver software; and a (c) Qualified OEM server system. Combined, this validated solution provides unprecedented rendering and compute performance at a fraction of the cost, space, and power consumption of traditional CPU-based simulation nodes.

Built on the NVIDIA Ampere™ architecture, the NVIDIA® Quadro RTX™ A6000 and NVIDIA® A40, combine 48GB of graphics memory with the latest generation RT Cores, Tensor Cores, and NVIDIA Ampere architecture CUDA® cores for unprecedented graphics, rendering, and AI performance. Additional support for a range of commercially available remote access software means you can access the power of your Quadro desktop workstation from anywhere. Achieve breakthrough innovations with the world's most powerful graphics solution

NVIDIA Quadro RTX 8000 and RTX 6000, powered by the NVIDIA Turing™ architecture and the NVIDIA RTX platform, brings the most significant advancement in computer graphics in over a decade to professional workflows. Not only can Designers and artists now wield the power of hardware-accelerated ray tracing, deep learning, and advanced shading to dramatically boost productivity and create amazing content faster than ever before, Simulation Engineers, and Fluid Dynamicists can also benefit from fast performance single precision GPU computing.

Altair ultraFluidX is a simulation tool for ultra-fast prediction of the aerodynamic properties of passenger and heavy-duty vehicles as well as for the evaluation of building and environmental aerodynamics. Its cutting-edge technology is optimized for GPUs to deliver unbeatable performance and to allow for overnight simulations of complex cases on a single server. With ultraFluidX, the Lattice Boltzmann Method is a perfect fit for massively parallel architectures like GPUs and sets the stage for unprecedented turnaround times. Overnight runs on single servers become possible by utilizing state-of-the-art GPU optimized algorithms, while delivering the fidelity of a transient LES aerodynamics simulation. Conventional simulation approaches need thousands of CPU cores to achieve the turnaround times of ultraFluidX. GPU-based solution increases throughput while reducing hardware and energy cost.

EGX Servers, built by our OEM Partners, undergo NVIDIA’s Qualification test suite. Among systems that qualify as an EGX Server there is a subset that has gone through additional testing and validation for Altair ultraFluidX workload. These EGX Server Validated systems capture best practices from NVIDIA and its ecosystem partners.

Configurations for the Validated EGX Servers are listed in the below segment.

2.1 VALIDATED SERVER CONFIGURATIONS

Table 1 outlines the servers utilized to complete the NVIDIA EGX Server validation process.

Table 1: Validated Server Configurations

Server Model	Graphics	Configuration
<u>TYAN Thunder HX FT77D-B7109</u>	<p>8x Quadro RTX 8000</p> <p>4x Quadro RTX NVLink HB bridge 2-slot</p> <p>Quadro Driver Release 430 U2 (430.14)</p>	<ul style="list-style-type: none"> • Dual Intel® Xeon® Gold 6126 processor: 2.6-3.7GHz; 12 Cores, 24 Threads • 384 GB ECC DDR4 memory • 1TB M.2 PCIe NVMe SSD • RHEL 7.6
